Adrian Schmidt  
Zeki Seskir  
Lee Rozema (Moderation)

Quantum technologies (QT) are advancing rapidly, promising transformative impacts across science, industry, and society. Alongside these developments, there is a growing need to consider their broader implications. This short impulse talk offers an introduction to the Ethical, Legal, and Social Aspects (ELSA) of QT. It will provide a brief orientation to the emerging discourse around ELSA of QT, its relevance for quantum research and innovation, and the importance of integrating these perspectives early in the development process.
